Ref. Slide:	Date: 07/08/2015

Short Summary: Schedule

Problem/Comment:

Meet with NEN management to determine real need dates for installation, drop dead dates, and any possible margin or schedule relief.

Proposed Resolution:

Conduct suggested meeting with NEN.

Assigned to:

Martin Perrine, 567

Assigned Date:

07/13/2015

Resolution:

DAPHNE has met with NEN management regarding schedule. A summary of the schedule is in the following table along with comments on our status and perceived margin as of June 2016. Currently, there are no specific and hard drop dead dates established as mission dates are far out and still in flux. Recently there was a one year delay announced by the mission. Current deadlines for the DAPHNE units are expected to slide back. Delivery of the test unit this November is the only delivery of concern. We are requesting a couple months delay to make accommodations for a high rate test source and to adjust the system for a simpler architecture that will avoid the purchase of an expensive RAID unit.

DAPHNE's hardware deliverables	original deadline	current deadline	status	margin
Two phase I units for ASF	2016 time frame	June 2016,	Unit Shipped July 27	Actual mission need for the first unit is over one year away. Mission need for second unit is further out.
